

## Know Your Stainless Steel Top Safety J vs. Safety Return

WB Mfg. Manufactures two types of stainless steel safety returns; The “Safety Return” and the “Safety J Return”, each of which is applied for different reasons. See the comparison below to find which one is being applied to your table.

### Safety Return

- Stainless Steel top with wrapped and welded sides. The wrapped sides are turned in at the bottom so the edge runs parallel to under side of the surface
- Used on LOBO Tables
- Top is NOT available to be purchased individually.

### Safety J Return:

- Stainless Steel top with wrapped and welded sides. The wrapped sides are formed at the bottom into a J shape so the raw edge of steel is turned up under the surface.
- Used on TORO Tables
- Top can be purchased individually.
